

HEAT SHIELD

NEW

Universal Catalytic Converter Shield

Most of us are all too familiar with the sound of a metallic rattling coming from under a vehicle. All too often it's the catalytic converter shield hanging off and dragging on the road.

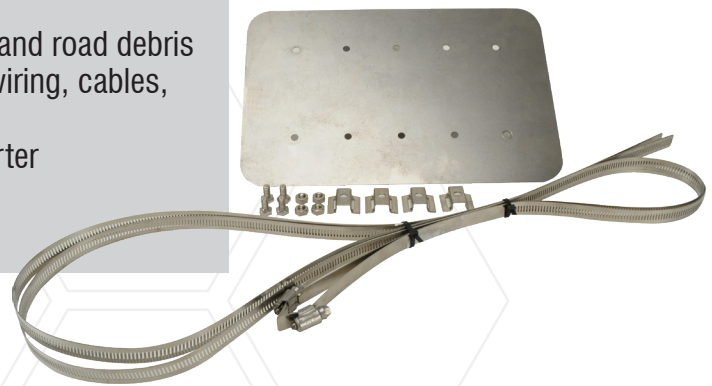

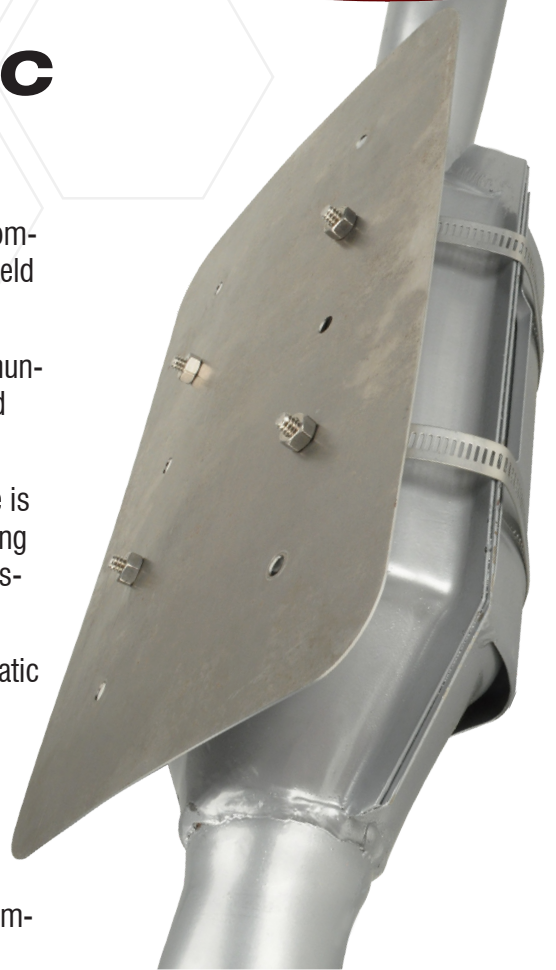

With the cost of replacing a catalytic converter ranging from a few hundred dollars to over \$1,000 at the dealership, DEI offers an easy and less expensive solution, a universal catalytic converter shield.

Catalytic converters get extremely hot and without a shield a vehicle is vulnerable to oil or grease landing on the converter potentially causing a flammable condition. Parking on dry grass or leaves is another possible fire causing condition.

Replacing a factory or OE catalytic converter shield can be problematic since most are welded in place or have bolts that hold the shield in place and most times those bolts are rusty and difficult at best to remove.

DEI provides a simple and easy to install alternative. DEI universal catalytic converter shields can be formed to the contour of catalytic converters and the shield is held in place by the use of two 34" worm-drive style clamps. It's that easy.

- Protection against flammable oil & grease
- Protecting the catalytic converter from grass and road debris
- Protect other under vehicle components i.e. wiring, cables, brake & fuel lines
- No need to replace expensive catalytic converter
- Easy to install
- Includes all clamps, hardware & instructions

UNIVERSAL CATALYTIC CONVERTER SHIELD

| Part # | Description |
